

# ACME OPERATIONS HANDBOOK

## RAG Test Corpus — Fictional Company Document

Version 3.2 | Effective date: 1 July 2026 | Document owner: Operations Excellence

### Purpose

This fictional handbook is designed as a test document for retrieval-augmented generation (RAG) systems. It contains policies, procedures, thresholds, responsibilities, dates, exceptions, and structured facts that can be used to evaluate document ingestion, chunking, semantic retrieval, citation, and question answering.

### 1. Company Overview

Acme Digital Services Pvt. Ltd. provides software implementation, managed analytics, and customer-support operations for mid-sized enterprises. The company operates from Bengaluru, Pune, and Hyderabad. The Bengaluru office is the primary engineering hub, Pune is the customer operations hub, and Hyderabad hosts the data and security engineering team.

The company follows a hybrid working model. Employees are normally expected to work from an office at least two days per week unless their role or approved exception states otherwise. Customer-facing teams may have different schedules defined in their account operating plan.

### 2. Working Hours and Attendance

Standard working hours are 9:30 AM to 6:30 PM local time, Monday through Friday, with a one-hour lunch break. Employees may shift their start time by up to 60 minutes with manager approval, provided customer coverage and team meetings are not affected.

An employee arriving more than 30 minutes after their approved start time must update the attendance system before the end of the working day. Three unreported late arrivals within a calendar month trigger a manager review. Attendance corrections must be submitted within five business days.

### 3. Leave Policy

| Leave Type     | Annual Allowance                            | Approval Requirement                                                         |
|----------------|---------------------------------------------|------------------------------------------------------------------------------|
| Annual Leave   | 18 working days                             | Manager approval                                                             |
| Sick Leave     | 12 working days                             | Manager notification; medical proof may be requested for 3+ consecutive days |
| Personal Leave | 6 working days                              | Manager approval                                                             |
| Parental Leave | As defined by applicable law/company policy | HR approval                                                                  |

Annual leave requests of more than five consecutive working days should normally be submitted at least 10 calendar days in advance. Emergency leave may be reported after the absence begins, but the employee must notify their manager as soon as reasonably possible.

### 4. Expense Reimbursement

Business travel expenses must be submitted within 15 calendar days of the employee's return. Receipts are required for individual expenses above INR 1,000. Expenses below INR 1,000 may be submitted without a receipt only when the employee provides a valid expense description and the expense category is permitted.

Hotel reimbursement is capped at INR 6,500 per night in Bengaluru, Pune, and Hyderabad. For other Indian cities, the standard cap is INR 5,000 per night. International hotel limits are defined separately by Finance and depend on

the destination country.

Taxi or rideshare reimbursement is permitted for airport transfers and business travel between approved customer locations. Premium vehicle categories require prior approval except when no standard category is available.

## 5. Information Security

All employees must use multi-factor authentication (MFA) for corporate applications that support MFA. Passwords must not be shared with colleagues, customers, vendors, or family members. Corporate credentials must not be stored in plain-text documents, spreadsheets, source-code repositories, or chat messages.

Company laptops must use full-disk encryption and an approved endpoint protection agent. Employees must lock their screen whenever leaving a company device unattended. Lost or stolen devices must be reported to the Security Operations team immediately and, where possible, within 30 minutes of discovery.

## 6. Data Classification

| Classification | Examples                                                        | Handling                                     |
|----------------|-----------------------------------------------------------------|----------------------------------------------|
| Public         | Published website content, public job postings                  | May be shared externally                     |
| Internal       | Internal procedures, team schedules                             | Company employees only                       |
| Confidential   | Customer contracts, employee records, non-public financial data | Need-to-know access                          |
| Restricted     | Credentials, encryption keys, highly sensitive customer data    | Explicit authorization and enhanced controls |

Restricted information must not be copied into public generative-AI tools or personal cloud storage. Confidential customer information may be processed only through company-approved systems and only for an authorized business purpose.

## 7. Incident Management

A security incident includes suspected credential compromise, accidental disclosure of confidential data, malware infection, unauthorized access, or loss of a corporate device. Employees should immediately report suspected incidents through the Security Incident Portal. If the portal is unavailable, the employee should contact the Security Operations on-call channel.

Severity 1 incidents are critical events affecting production systems, major customer operations, or sensitive data. The incident commander must be assigned within 15 minutes of confirmation. Severity 2 incidents are significant but have a contained impact; ownership must be assigned within 30 minutes. Severity 3 incidents are lower-impact events and should normally be triaged within four business hours.

## 8. Customer Support Service Levels

| Priority      | Initial Response | Target Resolution |
|---------------|------------------|-------------------|
| P1 — Critical | 15 minutes       | 4 hours           |
| P2 — High     | 1 hour           | 8 business hours  |
| P3 — Normal   | 4 business hours | 3 business days   |
| P4 — Low      | 1 business day   | 5 business days   |

P1 incidents require continuous communication at least every 30 minutes until service is restored or the incident is downgraded. P2 incidents require an update at least every two hours during active investigation.

## 9. Software Development Standards

Production code must be reviewed by at least one other engineer before merge. Changes affecting authentication, authorization, encryption, payment processing, or customer data require two reviewers. Direct commits to the main production branch are prohibited.

Automated tests should run in CI for every pull request. A pull request that reduces test coverage below 80% requires explicit approval from the engineering manager. Production deployments must have a rollback plan.

## 10. Procurement and Vendor Management

Purchases below INR 25,000 require manager approval. Purchases from INR 25,000 to INR 2,00,000 require manager approval plus Finance review. Purchases above INR 2,00,000 require department-head approval, Finance review, and a procurement record.

New vendors handling Confidential or Restricted information must complete the security due-diligence process before production access is granted. Vendor contracts must identify the data handled, retention expectations, security responsibilities, and incident-notification obligations.

## 11. Business Continuity

Critical customer-facing services must have documented recovery procedures. The target recovery time objective (RTO) for Tier 1 services is four hours, while the target recovery point objective (RPO) is one hour. Tier 2 services have an RTO of 12 hours and an RPO of four hours.

Business continuity exercises are conducted twice per year. Exercise findings must be documented within 10 business days, and high-risk findings require an owner and target remediation date.

## 12. Frequently Referenced Contacts

| Function            | Contact Method                             | Availability                   |
|---------------------|--------------------------------------------|--------------------------------|
| IT Help Desk        | Internal Service Portal                    | 24 × 5                         |
| Security Operations | Security Incident Portal / On-call channel | 24 × 7                         |
| HR Operations       | HR Service Desk                            | Monday–Friday, 9:30 AM–6:30 PM |
| Finance             | Finance Service Desk                       | Monday–Friday, 9:30 AM–6:30 PM |

## 13. RAG Evaluation Questions

1. How many annual leave days does an employee receive?
2. What is the receipt threshold for business expenses?
3. What is the hotel reimbursement cap in Bengaluru?
4. How quickly must a lost company laptop be reported?
5. What is the difference between Confidential and Restricted data?
6. What is the initial response SLA for a P1 customer issue?
7. How many reviewers are required for authentication-related changes?
8. What purchase approvals are required for an amount above INR 2,00,000?
9. What are the RTO and RPO targets for Tier 1 services?
10. How often are business continuity exercises conducted?

End of document — fictional content created for RAG testing.
